

Project: Turnkey EPC
Industry: Utility
Location: Martindale, TX
Budget: \$42 Million
Project Duration: Started: August 2023
Ended: November 2024

Substation, Martindale, TX

Objective:

A client in Martindale, TX sole-sourced Saber for the construction of a new substation in Martindale, Texas.

Saber provided all construction services for the new, 345 kV substation in a breaker and a half configuration. The station can support up to eight elements. Project scope also includes four 345 kV transmission line dead-end structures to support interconnections from two pre-existing substations and two future generators.

The sitework portion of the project included standard clearing and grading of the site, as well as the installation of a TXDOT deceleration lane, access roads, stormwater detention pond and retaining wall.
